Message from Ram Moorthy, Clinic Director

“The purchase of the 640 slice CT scanner marks an extremely exciting time for the BCAI. To be able to offer patients the highest available technology, in the idyllic setting of our clinic is something we are extremely proud to have achieved. With continued growth in referrals and excellent patient feedback, we look forward to building upon this success over the coming years.”

Online Referral and Remote Viewing

To simplify the referral process, and allow our clinicians to book appointments quickly and easily, we have created an online referral system via our website. In addition, by arrangement, clinicians may view their patient’s CT scans remotely 24/7. We have also introduced an option to send scans to other hospitals you may be practicing at, again available through our website. You are able to submit your request on the ‘request form’, and the scan will be sent immediately upon completion.

You can view your CT images on line with our remote access system. For details please contact our Lead Radiographer, Melanie Weeden on 01628 760901 or email melanie@bridge-clinic.com

By clicking on the ‘request a scan’ tab at the top of our homepage: http://www.bridgect.co.uk/index.htm, and registering, you will be able to request patient scans electronically. The process is simple and you will receive authorisation within 48 hours.

Overview of Scanner

The scanner, one of only two such scanners in the Thames Valley region, provides a new standard in imaging, the benefits of which include low dose radiation and greater accurate diagnosis of scans. Patients are normally no longer than a few minutes in the open scanner, which is a real benefit for those patients who may be anxious or who suffer with claustrophobia.

Our scanner is approved and recognised by all major insurers, and comprehensive payment packages are available for self-pay patients. We are able to scan for: cardiac, neurological, orthopaedic, urological, and respiratory conditions.

BCAI Scans 1000th Patient

Bridge Clinic Advanced Imaging recently scanned their 1000th patient, Mandy Norton, marking a significant landmark for the practice. In attendance were Consultant Radiologist Dr Anil Kumar, CT Assistant Lynn Boyd, and CT Radiographer Melanie Weeden.
